DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

> The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 57, 60, 61, 70, 73, and 74 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With respect to claims 57 and 70, there is no claim requirement of a cross-support or building. As such, the claim fails to further limit the bracket of claim 52.

With respect to claims 60 and 73, the claims fail to further limit the claim recitations of the second plate with respect to the inside surface of the crossbeam as recited in claims 52 and 64, respectively. Claims 61 and 74 recite similar ambiguities with respect to the first plate relative to the top surface of the crossbeam.

Though not ambiguities per se, the applicant should note that recitations to "work adjacent the leading edge" in claims 62, 65, and 75, and a freeze block that "can be installed" in claims 63 and 76, are functional recitations that add no patentably distinct considerations to the structure of the bracket.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

> A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 52, 53, 55-66, and 68-76 are rejected under 35 U.S.C. 102(b) as being anticipated by Palmer #6,039,150. Palmer, as best seen in Figures 3 and 4, disclose a scaffold bracket for a building comprised of horizontal support 28, vertical support 56, an L-shaped brace 78, attached to a lower end of the vertical support, which can receive a beam/cross-support 15 therein, and an anchor assembly 60, 82, having an inwardly extending horizontal plate portion and a downwardly extending vertical plate portion that together engage top and inside surfaces of a beam/cross-support 14, respectively.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington,* 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 52-76 are rejected under the judicially created doctrine of double patenting over claims 1-25 of U. S. Patent No. 6,722,468 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter,

as follows: the structure of the anchor assembly as claimed, specifically, the first and second plates adapted to engage top and inside surfaces of cross-support, an L-shaped brace, and horizontal and vertical supports.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Flynn #5,829,549 and Kilgore #4,276,957 are cited to teach scaffold brackets.
